This wiring diagram illustrates the electrical system for the 1990-1991 Toyota Camry 2.0L engine. The diagram is organized into several sections:

- Engine Control Relay:** Located at the top left, it features terminals A, B, and C. Terminal A is connected to a 1.25R fuse. Terminal B is connected to a 0.85R fuse, which then splits to the Camshaft Position Sensor (B-109) and the Crank Angle Sensor (B-52). Terminal C is connected to a 1.25R fuse, which then splits to the Crank Angle Sensor (B-52) and the Air Flow Sensor (8).
- Sensors:**
  - Camshaft Position Sensor (B-109):** A three-terminal sensor (L, B-W, SB) connected to the engine control relay and the INVECS-II system.
  - Crank Angle Sensor (B-52):** A three-terminal sensor (1, 2, L-R) connected to the engine control relay and the INVECS-II system.
  - Air Flow Sensor (8):** A two-terminal sensor (N, SB) connected to the engine control relay and the INVECS-II system.
- INVECS-II:** The central engine control unit, receiving signals from the sensors and controlling the injectors.
- Injectors:** Four injectors (B-117, B-114, B-118, B-115) are shown, each with a 0.75R fuse and a 1.25R fuse. They are connected to the INVECS-II system and the engine control relay.
- Grounding:** The diagram shows multiple ground points, including a 5V ground for the sensors and a common ground for the injectors.

A diagram of a 4-bit shift register. It consists of four rectangular cells labeled 1, 2, 3, and 4 from left to right. Above the cells, there is a horizontal line with a small rectangular pulse (clock signal) positioned over the boundary between cells 2 and 3. The entire register is enclosed in a larger rectangular frame.
